Appendix C List of Available Tabulations

COLORADO

THE CENTENNIAL STATE

ATTAINED STATEHOOD IN 1876
63 COUNTIES
5 CITIES WITH POPULATION OVER 100,000
LOWEST ELEVATION - 3,350 FEET
HIGHEST ELEVATION - 14,433 FEET

53 MOUNTAIN PEAKS OVER 14,000 FEET
STATE FLOWER - COLUMBINE
STATE BIRD - LARK BUNTING
STATE ANIMAL - BIGHORN SHEEP
STATE TREE - BLUE SPRUCE

INTRODUCTION

This report provides a summary of Colorado vital statistics tabulated from certificates of births and deaths which occurred during the calendar year 1978 and which were registered in the Department of Health prior to April 15, 1979. Transcripts of records for persons who were born or died in other states are routinely exchanged between the state of occurrence and state of residence and these data are included, allocated to the county of residence.

BEST COPY AVAILABLE

Data in this report are shown for the state, each planning district, and each county. When evaluating differences in birth and death rates among the counties or between state and national rates it should be kept in mind that the age distribution of the population probably accounts for much of the difference in rates. Counties with young populations, for example, usually have high birth rates and low death rates. Also, rates for sparsely populated counties should be interpreted with particular caution because just one or two more or fewer births or deaths will change the rates substantially.

More information, including data for cities, is available upon request to the Public Health Statistics Section of the Colorado Department of Health (address on title page). A list of tabulations that are processed routinely each year appears in Appendix C. Also, consideration will be given to requests for special tabulations.

POPULATION - Pages 1-7

The population figures used in this report are the actual census counts by the United States Bureau of the Census for years in which the national decennial censuses were taken, and estimates prepared by the State Division of Planning for other years.

Estimation of population is based on two factors - the natural increase (births less deaths) and the net effect of in- and out-migration. The natural increase is known quite precisely from year to year, but migration is difficult to measure. Consequently, as more data become available, it is necessary to revise previous estimates to keep meaningful relationships from year to year. Thus, many of the population figures published in previous years have been revised in order to keep them in line with the latest census and estimates for the current year.

The population used in analyzing the 1978 data is estimated to be 2,664,000. This figure represents an increase of 456,741 persons since the census of 1970 - a growth of 20.7%. Colorado ranks 28th of the 50 states in total population and, during the eight years since the census, has been the 8th fastest growing state.

BIRTHS - Pages 8, 9, 11-14, 17-19, 21-24

Summary figures for births in 1978 show that there were:

44,506 - Total number of births occurring in Colorado
including 727 - births within Colorado to non-residents
44,063 - Total number of births to Colorado residents
including 43,779 - births within the state to Colorado residents
284 - births outside the state to Colorado residents

Since 1961, the peak year when 44,648 resident births were recorded, there was a steady decrease to 34,899 births in 1966, followed by an irregular increase to 44,063 births in 1978. However, the smaller number of births in 1978 compared to the greatly increased population in 1978 resulted in a birth rate of only 16.5 births per 1,000 population compared to 24.3 in 1961. The lowest rate recorded in Colorado since such tabulations were made beginning in 1928, occurred in 1974 when there were 15.1 births per 1,000 population. The highest rate since 1928 was 26.9 in both 1951 and 1952. Preliminary figures for 1979 indicate the increase evident during the past three years will continue and the number of births in 1979 will pass the previous high figure in 1961.

Colorado's declining number of births from 1961-66, the upswing during the 1967-70 period, a decline again in the early 1970's and increase in the mid and late '70's reflects the trend for the nation as a whole. The low number of births during the mid-60's probably was due in part to the low number of babies born during the early 1940's; however, the large number of babies born in the mid and late 1950's is now at prime childbearing age, and it would be expected that the birth rate would be increasing at a much faster rate than it is. Also, there has been a substantial increase in marriages in Colorado, from about 17,000 in 1961 to 31,129 in 1978. Thus it appears that many families are limiting their number of children. This premise is supported further by the fact that 44.6% of all babies born in 1978 were the firstborn child. In 1961, 24.9% were firstborn children, indicating that now fewer second, third, fourth and more children per family are being born. Other indications of the change in the childbearing pattern are evident in the data below which shows the delay in childbearing age. The single year of age of the mother at which most births occurred in 1978 is age 24, compared to 20 in 1967, and the proportion of births occurring to mothers under age 25 is less now than at any time in the past 12 years.

SINGLE YEAR AGE OF MOTHER AT WHICH MOST BIRTHS OCCURRED AND PERCENT OF BIRTHS UNDER AGE 25 - Colorado Residents, 1967-1978

Year	Modal Age of Mother	Percent of Births to Mothers Under 25 Years of Age
1967	20	54.9
1968	21	56.4
1969	22	55.8
1970	23	56.9
1971	24	57.5
1972	25	55.4
1973	24	55.0
1974	22	54.0
1975	23	52.9
1976	23	50.9
1977	24	49.5
1978	24	48.5

To indicate the change in childbearing patterns during the past four decades, fertility rates (number of births each year per 1,000 women age 15-44 years) for the United States and Colorado for census years 1940-1970, and 1978 are shown.

FERTILITY RATES, COLORADO RESIDENTS AND UNITED STATES, SELECTED YEARS, 1940-1978

Year	COLORADO			UNITED STATES
	Women 15-44 Years	Number of Births	Fertility Rate	Fertility Rate
1940	260,721	21,416	82.1	79.9
1950	293,967	33,853	115.2	106.2
1960	355,530	42,905	120.7	119.0
1970	484,921	41,480	85.5	87.6
1978	625,247(Est.)	44,063	70.5	66.4

The birth data for 1978 shows that 98.8% of all births were attended by physicians with 98.3% taking place in hospitals. The sex ratio was 105 males to every 100 females. The median weight of babies born in Colorado was 7 pounds 2 ounces (3,233 grams) compared with 7 pounds 6 ounces (3,340 grams) (1977) in the United States as a whole.

Another statistic of particular concern when compared with national data is the proportion of babies that are low birthweight, defined as 5-1/2 pounds (2,500 grams) or less. In Colorado in 1978 this ratio was 8.2% compared with a national figure of 7.3%. Although it has not been shown to be the only factor, there appears to be a strong relationship between altitude and low birthweight - the higher the altitude, the greater the proportion of low birthweight babies. Those counties with average altitude above 8,000 feet had 10.2% of total births less than or equal to 2500 grams. It is noted, however, that the proportion of low birthweight babies has decreased during the last ten years, being 10% or higher in 1969 and earlier years.

The number of illegitimate births increased 9.0% in 1978 compared with 1977 and the rate increased from 113.9 to 121.3 illegitimate births per 1,000 total live births. The rate has been increasing steadily since 1957 when it was 34.7. Prior to 1957, it fluctuated between a low of 20.4 in 1940 and a high of 41.2 in 1945. Probably the biggest factor causing the steady increase in number of illegitimate births continues to be the age distribution of the female population. The proportion of young women in their late teens has been increasing as a consequence of high birth rates during the early '60's, giving a proportionately large number of young women capable of childbearing but not yet married.

FETAL DEATHS - Pages 11, 18, 20, 25

Since 1968, the reporting of fetal deaths of all periods of gestation has been required by State law. The total fetal death ratio (including all periods of gestation but excluding induced abortions) has been decreasing steadily for the past nine years - 73.0 fetal deaths per 1,000 live births in 1969, and 51.5 in 1978. It is apparent that reporting of early fetal deaths is not complete because, in some cases, the mother herself may not be aware she is pregnant, and no medical attendance is sought at the time of miscarriage. Reporting is more complete for fetal deaths over 20 weeks gestation and the ratios during the past ten years show a decrease from 20.2 fetal deaths per 1,000 live births in 1969 to 13.0 in 1978.

The major interest in fetal death statistics concerns those fetal deaths which are included in the usual definition of perinatal mortality - death of a fetus of 20 weeks or more gestation and death of a liveborn infant before the 28th day of life. The perinatal death rate in 1978 was 19.4 perinatal deaths per 1,000 deliveries (live births and fetal deaths of 20 weeks gestation and over).

The number of induced abortions reported in 1978 was 15,397, an increase of 19.2% over 1977. It is estimated, however, that during the past three years there has been substantial underreporting (perhaps as much as 25%) of induced abortions. Consequently, the trend is difficult to interpret accurately. It is assumed the 1978 figure of 15,397 is within 10% of the actual figure. The age distribution of women having induced abortions shows 32% under age 20 and 4.2% at age 35 years or more. For comparison, the same figures for live births show 14.1% under age 20 and 4.0% age 35 and over.

DEATHS - Pages 8, 10, 11, 12, 15-18, 20, 21, 26-34

Summary figures for deaths in 1978 show that there were:

18,967 - Total number of deaths occurring in Colorado
including 1,178 - deaths within Colorado to non-residents
18,325 - Total number of deaths to Colorado residents
including 17,789 - deaths within the state to Colorado residents
536 - deaths outside the state to Colorado residents

The 18,325 deaths of Colorado residents in 1978 is 2.5% higher than the 17,875 deaths in 1977, and the death rate was 6.9 deaths per 1,000 population compared to 6.8 in 1977. The largest number of deaths ever recorded in Colorado occurred in 1973 when 18,633 residents died. As shown in Table 10, the death rate had been declining steadily during the past several decades, but has remained about the same for the last five years. Preliminary figures for 1979 show that the number of deaths and the death rate will be about the same as in 1978.

The number of males who died in 1978 was 10,122 compared with 8,202 females. Male deaths exceed female deaths for every 5 year age group up to age 80. The median age at time of death was 68.7 for males and 76.5 for females. The four leading causes of death - heart disease, malignant neoplasms, cerebrovascular disease and accidents - accounted for 67.6% of all deaths. The table below shows the gain in life expectancy, if certain causes of death were eliminated, based on 1969-71 mortality figures.

GAIN IN EXPECTATION OF LIFE AT BIRTH DUE TO ELIMINATION OF SPECIFIED CAUSES OF DEATH, BY COLOR AND SEX: United States, 1969-71*

Cause of death	Total	White		All other	
		Male	Female	Male	Female
1. Infective and parasitic diseases	.17	.13	.12	.37	.32

*Gain expressed in years.
Source: United States Life Tables by Causes of Death: 1969-71; U. S. Department of Health, Education and Welfare, National Center for Health Statistics; published in May, 1975.

Since records have been kept, the Colorado death rate has been consistently lower than the national rate. This probably is due to the fact that Colorado has a younger population than the nation as a whole, which is indicated also by the fact that death rates from chronic diseases are low for Colorado. However, one of the ten leading causes of death for which the rate in Colorado is consistently much higher than for the nation is suicide. The rate for 1978 in Colorado was 56% higher than for the national rate - 18.6 compared to 11.9. It should be noted also that emphysema, which in 1968 was the 7th ranking cause of death, causing 409 deaths, is the 11th ranking cause in 1978 with 213 deaths.

CAUSE OF DEATH	COLORADO			UNITED STATES (Provisional)		
	Rank	Number	Rate*	Rank	Number	Rate*
Heart Disease	1	6,166	231.5	1	724,830	334.6

TOTAL		18,325	6.9		1,919,210	8.9

*Number of deaths per 100,000 population.

Infant and Maternal Deaths - Pages 8, 10, 11, 12, 17, 18, 21, 26

The group of deaths most often compared among geographic areas or time periods are those deaths occurring during the first year of life. During the past 38 years there has been a remarkable decrease in infant mortality in Colorado, from a rate of 59.5 infant deaths per 1,000 live births in 1940 to a rate of 11.2 in 1978. The current Colorado rate compares very favorably with the estimated national rate of 13.6.

The decrease in recent years in deaths directly related to pregnancy or childbirth is even more significant than the decrease in infant deaths - from a rate of 41.1 deaths per 10,000 births in 1940 to 0.5 in 1978. If the rate of maternal deaths that existed in 1940 had been the same in 1978 there would have been 181 maternal deaths in Colorado rather than the 2 that actually occurred.

MARRIAGES AND DISSOLUT[illegible] age 35

The marriage and marriage dissolution data in this report are reported by the county where the marriage license was obtained and where the dissolution took place. For both marriages and marriage dissolutions it is difficult to establish a usual place of residence because there are two parties involved who usually have different places of residence. For marriage dissolutions, State law does require a period of residence in a particular county for one of the parties, but there is no such requirement for the other party.

During 1978 there were 31,129 marriages and 18,590 marriage dissolutions and annulments reported in Colorado - a 3.5% increase in marriages and a 5.2% decrease in dissolutions over 1977. The number of marriages had increased steadily during past years until 1974 when a ten day waiting period was imposed between the date of the premarital blood test and issuance of the license. This requirement was repealed in 1975 and the number of marriages resumed an upward trend. It should be noted that on July 1, 1979 another change was made in premarital blood test requirements - now requiring the test for rubella and Rh only, and only for brides under age 45 who are physically capable of bearing children. However, this change probably will not significantly change the number of marriages performed in the state. Preliminary estimates for 1979 indicate there will be a very slight increase in marriages to about 32,000. The number of dissolutions had increased steadily during the past years, until 1978. Preliminary estimates for 1979 indicate the number of marriage dissolutions again will decrease slightly to 18,000.

The numbers and rates of marriages and marriage dissolutions reported since 1968 are as follows:

MARRIAGES AND MARRIAGE DISSOLUTIONS - Colorado Occurrences, 1968-1978

Year	Marriages		Dissolutions and Annulments	
	Number	Rate*	Number	Rate*
1968	22,849	10.8	8,552	4.0
1969	24,159	11.1	8,996	4.1
1970	25,000	11.3	10,400	4.7
1971	25,839	11.3	11,809	5.2
1972	27,095	11.5	12,604	5.3
1973	28,023	11.3	14,401	5.8
1974	26,061	10.1	15,104	5.8
1975	27,565	10.6	15,733	6.0
1976	28,601	10.9	17,520	6.7
1977	30,063	11.4	20,557	7.8
1978	31,129	11.7	18,590	7.0

*Rate per 1,000 population.

CERTIFIED COPIES - Page 36

An indicator of the volume of work done by the Records portion of a Vital Statistics office is the number of certified copies of vital records issued. There has been a steady increase in almost every year since counts of certified copies were first kept in 1940. It is interesting to note that a fee increase in 1954 (a doubling in fee from $1.00 to $2.00) sharply reduced the number of copies issued and a full recovery was not achieved until eight years later. The fee has not been changed since 1954.

The figures shown in this report are those for certified copies issued only by the State Office of Vital Statistics. This figure for fiscal year 1978-79 was 74,049. It is estimated that Local Registrars issued an equal number, so the total number of copies issued in 1978 was 148,000 divided about equally between copies of birth certificates and death certificates. Compared to the 63,500 new records filed in 1978, this was an average of 2.3 copies issued for each record filed, but it should be noted that for births in particular most of the copies were of records filed in past years and not those filed in 1978. These figures do not include verification of birth certificate data when copies are not issued, and do not include copies of records used for research or statistical purposes.

TABLE 1 - POPULATION BY AGE AND SEX, AND MEDIAN AGE BY COUNTY - COLORADO, 1970 CENSUS

COUNTY	TOTAL POPULATION	SEX		AGE GROUP						MEDIAN AGE
		MALE	FEMALE	UNDER 5 YRS.	5-14 YEARS	15-24 YEARS	25-64 YEARS	65 YRS. & OVER	% ≥65

APPENDIX B - LISTING OF COLORADO COUNTIES INCLUDED IN EACH PLANNING AND MANAGEMENT REGION

PLANNING AND MANAGEMENT REGIONS

Region 1
Logan
Morgan
Phillips
Sedgwick
Washington
Yuma

Region 2
Larimer
Weld

Region 3
Adams
Arapahoe
Boulder
Clear Creek
Denver
Douglas
Gilpin
Jefferson

Region 4
El Paso
Park
Teller

Region 5
Cheyenne
Elbert
Kit Carson
Lincoln

Region 6
Baca
Bent
Crowley
Kiowa
Otero
Prowers

Region 7
Huerfano
Las Animas
Pueblo

Region 8
Alamosa
Conejos
Costilla
Mineral
Rio Grande
Saguache

Region 9
Archuleta
Dolores
La Plata
Montezuma
San Juan

Region 10
Delta
Gunnison
Hinsdale
Montrose
Ouray
San Miguel

Region 11
Garfield
Mesa
Moffat
Rio Blanco

Region 12
Eagle
Grand
Jackson
Pitkin
Routt
Summit

Region 13
Chaffee
Custer
Fremont
Lake

APPENDIX C - LIST OF AVAILABLE TABULATIONS

1978 BIRTH STATISTICS

FILE	REPORT NUMBER	CONTENT
TOTAL EVENTS	11-02I	AGE OF MOTHER X COLORADO RESIDENTS & OCCURRENCES
RESIDENTS	12-01A	COUNTY OF RESIDENCE X ATTENDANT AND MEDICAL COMPLICATIONS
	12-01B	X MONTH OF OCCURRENCE
	12-01C	X EDUCATION OF MOTHER
	12-01D	X BIRTH WEIGHT
	12-01E	X MONTH CARE BEGAN
	12-01F	X BY AGE OF MOTHER
	12-01G	X BY RACE & SEX
	12-01H	X TOTAL LIVING CHILDREN
	12-02C	AGE OF MOTHER X EDUCATION
	12-02D	X BIRTH WEIGHT
	12-03D	MONTH CARE BEGAN X BIRTH WEIGHT
	12-04A	BIRTH WEIGHT X ATTENDANT AND MEDICAL COMPLICATIONS
	12-04G	X RACE AND SEX
	12-06A	PRENATAL VISITS X ATTENDANT AND MEDICAL COMPLICATIONS
	12-06C	X EDUCATION OF MOTHER
	12-06D	X BIRTH WEIGHT
	12-06F	X AGE OF MOTHER
	12-07A	EDUCATION OF MOTHER X ATTENDANT AND MEDICAL COMPLICATIONS
	12-07D	X BIRTH WEIGHT
	12-07E	X MONTH CARE BEGAN
	12-07G	X RACE AND SEX
	12-07H	X TOTAL LIVING CHILDREN
	12-08A	WEEKS OF PREGNANCY X ATTENDANT AND MEDICAL COMPLICATIONS
	12-09B	CITY OF RESIDENCE X MONTH OF OCCURRENCE
	12-14C	CONGENITAL MALFORMATION X EDUCATION OF MOTHER
	12-14J	X COUNTY OF RESIDENCE
	12-15D	COUNTY OF RESIDENCE AND X BIRTH WEIGHT
	12-15E	EDUCATION OF MOTHER X MONTH CARE BEGAN
	12-15G	X RACE AND SEX
	12-15H	X TOTAL LIVING CHILDREN
OCCURRENCES	16-01A	COUNTY OF OCCURRENCE X ATTENDANT AND MEDICAL COMPLICATIONS
	16-01B	X MONTH OF OCCURRENCE
	16-01G	X RACE AND SEX
	16-05D	INSTITUTION OF BIRTH X BIRTH WEIGHT
	16-05J	X COUNTY OF RESIDENCE
RESIDENT WOMEN WITH HIGH SCHOOL EDUCATION	17-06J	PRENATAL VISITS X COUNTY OF RESIDENCE
RESIDENT WOMEN WITH HIGH SCHOOL EDUCATION +	18-06J	PRENATAL VISITS X COUNTY OF RESIDENCE
RESIDENT ILLEGITIMATE	22-01A	COUNTY OF RESIDENCE X ATTENDANT AND MEDICAL COMPLICATIONS
	22-01B	X MONTH OF OCCURRENCE
	22-01C	X EDUCATION OF MOTHER
	22-01E	X MONTH CARE BEGAN
	22-01F	X AGE OF MOTHER
	22-01G	X RACE AND SEX
	22-01H	X TOTAL LIVING CHILDREN
	22-02D	AGE OF MOTHER X BIRTH WEIGHT
	22-06F	PRENATAL VISITS X AGE OF MOTHER
RESIDENT LOW WEIGHT	32-01C	COUNTY OF RESIDENCE X EDUCATION OF MOTHER
